MESSAGE FROM THE CHAIR

Thanks to the nearly 10,000 doctors in training who took part in the first Medical Training Survey (MTS). The survey gave trainees a collective voice, and the results detailed in this report now give the rest of us an opportunity to reflect and act on what they have said.

The MTS results create the first national, comprehensive picture of medical training in Australia. They provide an evidence-base that we can learn from to improve the culture of medicine and further strengthen medical training.

We have deliberately presented the results of the MTS unadorned. Trainee responses are presented in a series of static reports and the data are also accessible through an online reporting tool, accessible from the MTS website at <u>www.medicaltrainingsurvey.gov.au</u>. As promised, we have prioritised confidentiality and results are only published when there were 10 or more responses. We expect reporting detail to increase year on year, as the MTS is established.

The MTS aimed to gather the most comprehensive, national data possible about medical training in Australia. We are pleased to present these data directly to educators, policy makers, clinicians, employers and others who can use it to inform their work to strengthen medical training.

More than one in four trainees shared their perspectives on their training by doing the MTS. We hope that, over time, trainees gain confidence in the confidentiality and value of the MTS and that participation rates continue to increase. The MTS data are rich and provide fascinating insights. In general, trainees rate their quality of training very highly and there is a lot going well in medical training in Australia. Most trainees rated their quality of clinical supervision and teaching highly. About 75% of trainees work more than 40 hours per week, but many value the extra training opportunities this provides. Most trainees would recommend their current training post and nearly all intend to continue with their training program. We are delighted that close to 40% of eligible international medical graduates participated in the MTS and were generally very satisfied with their training experience. There are opportunities to improve trainee access to health and well-being support programs.

Trainees have sent a loud message about bullying and harassment and it is incumbent on all of us to heed it. We must all redouble our efforts to strengthen professional behaviour and deal effectively with unacceptable behaviour. We must do this if we are serious about improving the culture of medicine.

The Board is grateful to the stakeholders who worked with us to develop the MTS. Sincere thanks to all the members of our steering committee and advisory group, who shared their expertise and experience so openly. Special thanks to our small advisory group of doctors in training - with their vision, enthusiasm and commitment, the future of medicine is bright.

Dr Anne Tonkin Chair, Medical Board of Australia

INTRODUCTION

The Medical Training Survey (MTS) is a national, profession-wide survey of doctors in training in Australia. It is a confidential way to get national, comparative, profession-wide data to strengthen medical training in Australia. The MTS is conducted annually with doctors in training, with 2019 representing the first wave of data collection.

The objectives of the survey are to:

• promote better understanding of the quality of medical training in Australia

- identify how best to improve medical training in Australia, and
- identify and help deal with potential issues in medical training that could impact on patient safety, including environment and culture, unacceptable behaviours and poor supervision.

The Australian Health Practitioner Regulation Agency (Ahpra), on behalf of the Medical Board of Australia (the Board), commissioned EY Sweeney to undertake data collection and report on results for the MTS.

METHOD

Data collection for the MTS involved receiving responses to an online survey from n=9,917 doctors in training, with n=9,378 responses eligible for analysis (i.e. currently training in Australia) between 25 July and 7 October 2019.

Different versions of the survey were used to reflect the particular training environment of doctors who are at different stages in their training. Doctors in training answered questions about their experiences in their workplace. This could be the doctor in training's current setting, workplace, placement or rotation, or might be a previous setting, if they have only been practising or training in their current setting for less than two weeks.

INTERPRETING THIS REPORT

This report provides key results based on n=218 doctors in training, working in locations across the Northern Territory compared against national results (n=9,378) of all doctors in training.

Bases exclude 'not applicable' responses or where the respondent skipped the question. Data in this report are unweighted. Labels on stacked charts are hidden for results 3% or less. Results with base sizes of less than n=10 are suppressed.

Data percentages displayed throughout the report are rounded to the nearest whole number. As such, if there is an expectation for a given chart or table that all percentages stated should add to 100% or nets should equal to the sum of their parts, this may not happen due to rounding.

For this report, results for the Northern Territory are presented at an overall level. To explore results within each jurisdiction please visit www.medicaltrainingsurvey.gov.au/results

Executive summary

OVERALL SATISFACTION

I would recommend my current training position to other doctors

Q25. Thinking about how <COLLEGE> engages with you, to what extent do you agree or disagree with the following statements?

Regional Training Organisations (RTOs)

REGIONAL TRAINING ORGANISATIONS

Specialist GP trainees can be both enrolled in a Regional Training Organisation (RTO) as well as their specialist college (such as Australian College of **Rural and Remote Medicine** (ACRRM) and/or Royal Australian College of General Practitioners (RACGP)).

In total, 98% of specialist GP trainees in the NT are enrolled with a RTO, with 88% enrolled with Northern Territory General Practice Education as shown opposite.

Base: Specialist GP trainees, only fields with 10 or more responses shown for confidentiality reasons (n=40)

If applicable, which Regional Training Organisation provides your GP training? Q17.

IMGs: National response (n=1208)

IMGs: NT

Orientation

DID YOU RECEIVE AN ORIENTATION TO YOUR SETTING?

Doctors in training were asked questions about their experiences in their workplace. This could be the doctor in training's current setting, workplace, placement or rotation, or might be a previous setting, if they had only been practising or training in their current setting for less than two weeks.

Base: Total sample

Did you receive an orientation to your setting? Q27a.

HOW WOULD YOU RATE THE QUALITY OF YOUR ORIENTATION?

| | | Total excellen | t/good: 70% | Total te | errible/poor | : 4% |
|-------------------|----------|----------------|--------------|----------|--------------|-----------------|
| NT | (n=193) | 27% | 43% | | 25% | <mark>4%</mark> |
