THE 2023 MEDICAL TRAINING SURVEY

There is so much to learn from the rich data generated through the Medical Training Survey (MTS). As in past years, the headline results are interesting and important.

With five consecutive years' of MTS results now at our fingertips, we have the opportunity to examine the data closely and find the meaning beneath the surface. In this detail lies the evidence that can inform constructive change.

Organisations across the health sector owe it to current doctors in training, and our future medical workforce, to harness the value of this important data.

Once again, the MTS is proving an invaluable diagnostic tool, signalling what's going well in training and identifying issues to watch and act on. Trends are visible early, enabling close monitoring or swift action by the agencies best placed to respond and effect positive change.

Results this year are again broadly consistent with previous years, with some small but statistically significant variations. There is a lot going well in medical training with clear signs for optimism.

The 2023 MTS results show that the quality of supervision, orientation, education and training and patient safety training has improved. Trainees report that their workload and hours of work have reduced. Fewer trainees are considering leaving the profession. The upticks from last year's results, although small in change, are statistically significant and encouraging.

We also invite caution, given what is statistically significant may not always be practically meaningful with such a large sample size.

Early trends warrant close monitoring that is made possible by public access to the MTS data. It will be interesting to learn over time how much and what parts of trainee experiences relate to the easing of pandemicrelated pressures and what changes are flowing from both specific and systemic improvements.

Disappointingly, the culture of medical training needs ongoing attention. In such a complex system of shared accountabilities and responsibilities, there is no quick fix. The urgent need for ongoing commitment to building a culture of respect in medicine and medical training remains.

It is totally unacceptable that 54% of Aboriginal and Torres Strait Islander trainees experienced and/or witnessed bullying, harassment, discrimination and racism. It is inexcusable that 35% of all trainees did. The longitudinal MTS data makes clear that this area is yet to improve and shows a critical and urgent need for action.

There is nuance beneath the headline numbers and variation in the results, across medical disciplines, jurisdictions and health services. Year on year comparisons shine a light on where good things are happening and that specific initiatives are making a difference. It also spotlights areas where focus and action are needed.

Five years of legitimising trainees' experience, through MTS questions about culture and behaviour may in itself be encouraging doctors in training to speak up about these issues. Close longitudinal analysis is key.

There is a well-established link between culture and patient safety. Collaboration between frontline organisations will enable lasting cultural change. Ready public access to rich, longitudinal MTS data creates opportunities for shared learning that can support the cultural transformation our system needs.

The MTS again received strong participation from Aboriginal and Torres Strait Islander trainees with 176 responses. We value the feedback on experience of medical training provided by the Aboriginal and Torres Strait Islander trainees. This important data can support our journey towards providing culturally safe and appropriate medical training, and more broadly, culturally safe healthcare.

New questions on flexible training and working arrangements provide an important baseline to monitor future trends. Trainees report that their specialist colleges generally support (access to) flexible training, but this support is not replicated in the workplace. Nearly one in five considered accessing flexible working arrangements, but, were unable or chose not to access it.

I am grateful to every doctor in training who made it a priority to do the 2023 MTS. More than half Australia's doctors in training - 54.5% of trainees - have shared their insights. Agencies with the power to effect change must listen to what we are being told.

Dr Anne Tonkin AO Chair, Medical Board of Australia

INTRODUCTION

The Medical Training Survey (MTS) is a national, profession-wide survey of doctors in training in Australia. It is a confidential way to get national, comparative data to strengthen medical training in Australia. The MTS is conducted annually with doctors in training, with 2023 representing the fifth wave of data collection.

The objectives of the survey are to:

- promote better understanding of the quality of medical training in Australia
- identify how best to improve medical training in Australia, and

 identify and help deal with potential issues in medical training that could impact on patient safety, including environment and culture, unacceptable behaviours and poor supervision.

The Australian Health Practitioner Regulation Agency (Ahpra), on behalf of the Medical Board of Australia (the Board), commissioned EY Sweeney to undertake data collection and report on the results for the MTS.

METHOD

Data collection for the MTS involved receiving responses to an online survey from n = 23,298 doctors in training, with n = 22,337 responses eligible for analysis (i.e. currently training in Australia) between 9 August and 8 October 2023.

Different versions of the survey were used to reflect the particular training environment of doctors who are at different stages in their training. Doctors in training answered questions about their experiences in their workplace. This could be the doctor in training's current setting, workplace, placement or rotation, or might be a previous setting, if they have only been practising or training in their current setting for less than two weeks.

For this report, results for the Royal College of Pathologists of Australasia (RCPA) are presented at an overall level. To explore results within RCPA further, please visit <u>medicaltrainingsurvey.gov.au/results</u>.

INTERPRETING THIS REPORT

This report provides key results based on n = 248 doctors in training, at the RCPA compared against national results (n = 22,337 of all eligible doctors in training (i.e. currently training in Australia).

Bases exclude 'not applicable' responses or where the respondent skipped the question. Data in this report are unweighted. Labels on stacked charts are hidden for results 3% or less. Results with base sizes of less than n = 10 are suppressed.

Data percentages displayed throughout the report are rounded to the nearest whole number. As such, if there is an expectation for a given chart or table that all percentages stated should add to 100% or nets should equal to the sum of their parts, this may not happen due to rounding.

Executive summary

Base: Total sample

Q34. Thinking about access to teaching and research in your setting, to what extent do you agree or disagree with the following statements?

THE FOLLOWING EDUCATIONAL ACTIVITIES HAVE BEEN USEFUL IN YOUR DEVELOPMENT AS A DOCTOR

RCPA trainees were asked their level of agreement on whether an educational activity had been useful in their development as a doctor. Of the educational activities available, multidisciplinary meetings (88%), formal education program (86%) and teaching in the course of patient care (bedside teaching) (81%) were rated the most useful.

Q38. To what extent do you agree or disagree that the following educational activities have been useful in your development as a doctor?

Profile Training curriculum Orientation	Assessment	Clinical supervision	Access to teaching Facilities
